SUMMARY

Full Stack Developer skilled in building scalable, real-time applications using modern web technologies and distributed systems. Strong foundation in DSA, backend architecture, and problem-solving with hands-on experience in production-level projects. Hands-on exposure to Generative AI technologies, LLM APIs, RAG-based applications, and vector databases.

WORK EXPERIENCE

Software Development Executive Apprentice – Boeing India

Aug 2025 – Present

- Owned the development of a production-grade **.NET/WPF** data analysis tool, implementing a high-performance **SQLite** schema to transform unstructured flight records into structured, queryable insights.
- Engineered a real-time event-driven override system in **C#** using **MQTTnet**, architecting a low-latency **pub/sub** messaging protocol that eliminated manual simulation errors.
- Contributed in the migration of a large-scale synthetic trainer to **Unity 6**, resolving complex API deprecations and maintaining 100% functional parity across distributed modules.
- Architected automated **MSI builds**, streamlining deployment workflows and reducing manual release overhead for enterprise simulation environments.
- Built an AI-powered grading app using **React Native (Expo)** and **TypeScript**, integrating **OAuth** using Boeing's custom identity provider. Developed a **Reactjs** based Dashboard to view the Grading app Evaluations and incorporate **feedback pairs** to improve and reinforce **AI** the Model.

PROJECTS

Compeer – Collaborative Interview IDE

[GitHub](#)

Tools: Next.js, TypeScript, Socket.io, Y.js, Redis, WebRTC, PostgreSQL, Prisma, Docker

- Built a **scalable multi-user** collaborative IDE using **Monaco Editor** and **Y.js (CRDTs)** with real-time sync across distributed servers via **Redis pub/sub**.
- Implemented **peer-to-peer** video/audio using **WebRTC** with a custom signaling server for SDP and ICE exchange.
- Designed a **secure backend** with **JWT authentication**, **RBAC**, **PostgreSQL + Prisma**, and **Docker-based sandboxed execution**.

CI/CD Pipeline Vulnerability Analyzer

[GitHub](#)

Tools: Python, GitHub Actions, Ollama, Shell Scripting

- Developed a Python-based backend to analyze **GitHub Actions workflows**, detecting **security misconfigurations** using rule-based scanning.
- Generated **structured threat reports** highlighting **vulnerable patterns** in CI/CD pipelines.
- Integrated a local **LLM (Ollama)** and **APIs** to automatically generate **remediated YAML configurations**.

Task Management System

[GitHub](#)

Tools: React.js, Node.js, Express.js, MongoDB, Redux Toolkit, Tailwind CSS, JWT

- Built a **full-stack MERN** application with **role-based access control** and task lifecycle management.
- Designed **REST APIs** with **JWT authentication** and used **Redux Toolkit** for **global state management**.
- Developed a **responsive dashboard** with filtering, activity tracking, and real-time collaboration features.

EDUCATION

Indian Institute of Information Technology Dharwad

Nov 2022 – May 2026

B.Tech in Computer Science Engineering

GPA: 8.81 / 10

SKILLS

Languages	TypeScript, JavaScript (ES6+), C#, Python, C++, SQL, Bash
Frontend	Next.js, React.js, React Native, Redux Toolkit, Tailwind CSS
Backend	Node.js, Express.js, .NET, FastAPI, Pydantic, RESTful APIs, WebSockets, MQTT
Databases	PostgreSQL, Redis, MongoDB, SQLite, ChromaDB, Prisma
Systems	Distributed Systems, WebRTC, CRDTs (Y.js), RBAC, JWT, OAuth, RAG
Tools & CS	Git, Docker, CI/CD, Vercel, DSA, OOP, OS, DBMS, Networks
